Introduction

Index Objective

The S-Network Style Indexes and the VettaFi Style Indexes are families of indexes designed to measure the performance of portfolios exposed to a Growth or Value Style.

VettaFi Style Indexes are subsets of corresponding VettaFi indexes that do not exclude REITS and S-Network Style indexes are subsets of corresponding S-Network indexes that exclude REITs.

Constituents in these indexes are selected and weighted to strengthen their exposure to their desired style.

Highlights:

Growth/Value Indexes:

The indexes are style-modified float-adjusted cap weighted portfolios that maintain a broad representation of their parent indices and whose constituents maintain characteristics associated with their style.

Concentrated Growth/Value Indexes:

The indexes are equal weighted portfolios that select the parent constituents that most strongly represent their style.

Dates

Snapshot Dates: The starting universe is updated semi-annually based on data as of the last business days of May and November.

Reconstitution Dates: Close of trading on the third Fridays of the last month of each semi-annual period (Jun and Dec).

Record Dates: Share weights will be based on prices as of the close of trading on the day before the second Friday of the rebalancing month.

Rebalance Dates: Close of trading on the third Fridays of the last month of each quarter (Mar, Jun, Sep, and Dec.)

Style Ratings

Growth and value ratings are determined for each of the constituents of the base benchmark.

Growth ratings incorporate the following five fundamental factors:

1. Future short-term growth in earnings per share (FSGE)
2. 3-year historical growth in earnings per share (HGE)
3. 3-year historical growth in sales per share (HGS)
4. Investment-to-assets (INV)
5. 3-year historical growth in return on assets (ROA)

Value ratings incorporate the following four fundamental factors:

1. Book to price (BP)
2. Historical earnings to price (HEP)
3. Dividend to price (DP)
4. Sales to price (SP)

Each style factor is winsorized at the 2nd and 98th percentiles. Z-scores for each factor are then calculated for each winsorized factor. Composite growth and value gross scores are calculated using the following formulations:

Gross Growth Score = $\frac{2}{3} G1 + \frac{1}{3} G2$, where:

$$G1 = \frac{1}{2} z_{FSGE} + \frac{1}{3} z_{INV} + \frac{1}{6} z_{ROA}$$

$$G2 = \frac{2}{3} z_{HGS} + \frac{1}{3} z_{HGE}$$

Gross Value Score = $\frac{2}{3} V1 + \frac{1}{3} V2$, where:

$$V1 = \frac{2}{3} z_{HEP} + \frac{1}{3} z_{BP}$$

$$V2 = \frac{2}{3} z_{SP} + \frac{1}{3} z_{DP}$$

Style ratings are the result of the net score calculations below:

$$\text{Growth Style Rating} = \text{Gross Growth Score} - \text{Gross Value Score}$$

$$\text{Value Style Rating} = \text{Gross Value Score} - \text{Gross Growth Score}$$

Selection – Style Benchmarks

Style ratings are based on the “Snapshot Dates.”

Growth/Value Indexes:

Seventy percent of the parent indexes constituents with the highest Growth/Value Ratings are selected for inclusion.

Concentrated Growth/Value Indexes:

The 100 stocks from the parent indexes with the highest Growth/Value Ratings are selected for inclusion subject to a sector count cap of twice the percentage points of that sector’s weight in the index universe.

Select Concentrated Growth/Value Indexes:

- 1- Select top 100 by Net growth score a) whose price is under 1000, b) have a positive and available FCF/Debt ratio, and c) that do not cause the sector weights to be more than 2 times the sector weights in its Universe.
- 2- Select the top 50 from the top 100 selected above by largest FCF/Debt ratio.

Weighting – Style Benchmarks

Growth/Value Indexes:

1. The stocks contained in each index universe are percentile ranked based on their Growth/Value Ratings.
2. The thirty percent of universe stocks with the highest Growth/Value Ratings are weighted based on their full float-adjusted market capitalization.
3. The float-adjusted market capitalizations of the next forty percent of universe stocks are modified by their percentile ranks for weighting purposes. (e.g., 70th percentile stock will be accorded 70% of its float market capitalization for weighting purposes; 68th percentile stock would be accorded 68%; etc.)
4. The bottom 30% of the percentile ranked universe stocks receive no weighting as they are not included in the index.
5. These stocks are then weighted based on their style-modified float-adjusted market capitalization.

Concentrated Growth/Value Indexes:

Stocks in these benchmarks are equally weighted.

Select Concentrated Growth/Value Indexes:

Stocks in these benchmarks are equally weighted.

Rebalancing and Reconstitution

The Indexes are rebalanced on the “Rebalance Dates” and additionally reconstituted on the “Reconstitution Dates”.

Data used for reconstitutions are as of the “Snapshot Dates” .

Share weights for the rebalanced Indexes are computed as of the Record Date.

Changes to the Indexes related to the rebalances are as of the “Rebalance Dates” .

Index Maintenance

Please refer to the Index Maintenance Policy document for information on Corporate Actions, Data Sourcing, Pricing, Financial distress, Index Dissemination, and Data Correction Policy.

Index Calculation

Please refer to the Index Maintenance Policy document for information on index calculations.

Index Governance

The index is governed and managed by a VettaFi Index Committee for the purpose of meeting the goals of the index. For more information, please refer to the Index Governance document.
