The VettaFi Demographic Dividend Growth Index Family is family of indexes whose constituent weights are adjusted by a factor that measures the relative demographic growth rate of a country's working age population. The Developed Ex United States Demographic Dividend Growth Index modifies the weights of the VettaFi Developed World ex United States Index (VFDXUS) by applying a working age population growth factor to constituent weights.

## The Case for Demographic Dividend Indexes

1. The demographic dividend is the growth that a country's economy experiences due to the changing in the age structure of the working age population.
2. Growing workforce populations are a fundamental tailwind not often quantified in other models, creating a unique opportunity to enhance international exposure in countries poised for growth.
3. Overweighting countries with favorable demographics and a burgeoning young workforce population can help better align index exposure with economic growth potential.
